Company Profile

Founded in the year 1987 **HKIL** entered the Indian Banking Automation sector in 1988 with a first of its kind hardware Product "**BANCAL**™". This was a chip-based Back-office Automation solution even before the concept of organized computing. BANCAL was used in almost all leading Banks in India and achieved 1.5 lakh installations.

In 1997 **HKIL** introduced **BankSoft**™, a scalable and flexible Total Branch Automation (TBA) software application for Banking Sector. This was capable of processing data real time and immensely improved the banking service, resulting in over 4000 installations across India.

At present **HKIL** ushers forward with its two software products - **Tulip desk**™ & **HKStar**™**,** which efficiently meet the demands of the **Edutech and the Hospitality industries** respectively.

Custom software application development is also a strong forte of HKIL, having successfully developed and delivered e-Governance projects, Business Portals and Mobile Applications.

Throughout the company's journey of **34 years, HKIL** has not limited its portfolio to only in-house developed products and solutions. It has tactfully combined its experience and technical expertise with other solution providers, forming strong and mutually beneficial alliances. This has leveraged HKIL as a Systems Integrator and empowered it to commission many turnkey projects successfully.
